SPANCRETE MACHINERY CORPORATION ANNOUNCES NEW HUNGARIAN SPANCRETE FACILITY

Spancrete Machinery Corporation is pleased to announce their newest Spancrete hollowcore production facility, Hevesbeton Kft, located 75 kilometers northeast of the Hungarian capitol of Budapest.

What is unique about the new Spancrete facility is that the GT-240 machine system installed is capable of producing not only the standard 1.2-meter wide hollowcore slabs, but also 2.4-meter wide floor and wall products as well as E-Beams (190mm) used for traditional “beam and block” construction. After several visits to Spancrete’s plants in Wisconsin USA and reviewing all of the European based hollowcore production equipment, the owners of Hevesbeton decided to proceed with the Spancrete GT-240 system.

The Spancrete GT-240 system operates in the new plant built with precast elements. Hevesbeton erected precast beams, columns and roof trusses for the building structure and then cladded the exterior with Spancrete insulated, horizontally installed wall panels produced by the slipformer. The exterior of the panels were produced with a plain gray, raked finish to give a more decorative feature to the building. Hevesbeton achieved the double benefit of reducing their building costs by producing and installing their own wall panels for the exterior and gaining a good reference to show future customers. The installation of the Spancrete GT-240 system took place over a 3 week period in December of 2006. Wiggert & Co. GmbH supplied the batching plant.

GT-240 system producing 2.4 meter wide insulated wall panels.

Production of “Divided” Insulated Wall Panels (2, 1.2 Meter panels) with architectural finish.
